

How to calculate age accurately in excel
 First of all calculate the age in days

Date of Birth	age in days	Age in years
20-Jun-58	=NOW()-C18	58.24
01-Feb-59	21030.86	57.62
06-Oct-63	19322.86	52.94
19-Feb-60	20647.86	56.57
05-Jun-65	18714.86	51.27
07-Jul-59	20874.86	57.19

In the next column calculate the number of years

OK it ignores the leap years but this is better than most methods

The result should be the age of the person in years.
